Engineering UFO

Our Solution for your web project

Full cycle web development services

Engineering UFO

We focus on our key values to emphasize the best experience for our customers and employees.
We treat others how we would like to be treated - with dignity, respect, and gratitude.
Every situation is different, just as every person is unique.
Your time is our time, and we vow to find the most efficient solution to all your technical needs.
Your satisfaction is our guarantee.
A promise made is a promise kept with us.

OUR MISSION

Our mission is to make our clients' lives easier while expanding their business on the Internet.
We give clients more time to focus on the big picture while we take over the specifics of the development process. In addition,
we want to give the opportunity to hire as many qualified individuals in Ukraine as possible to use their technical knowledge and skills.

OUR TEAM

We are a premier software development company that aims to provide the ultimate experience for their customers and employees alike.

PORTFOLIO

Here are some successful project we built for our clients

Marketplaces aggregator
Market Box

Platform that simplifies the process of uploading products to marketplaces and managing them. Dashboards, order gathering and analytics functions included.

Tasks:

- To develop a platform for products' exporting/importing to marketplaces like Prom.ua, Rozetka.ua, etc. Gathering clients orders and data from marketplaces to the platform.
- Subscription system development. Give users access to different features inside the platform depending on their subscription plans.
- Creation of the functionality to add products to platform and to manage them. Syncing all data between the platform and marketplaces.
- UI/UX development and implementation.
- Product and orders analytics dashboard development. Users and roles management system.
- Automatic two-ways sync between platforms and marketplaces.

"The team is professional and extremely qualified."

CEO, Marketbox

POS for restaurants
Digital Food Technologies

Catering industry software development. An app, which goal is to connect Hosts and Clients. Hosts are people who cook and want to share their dishes. Clients are people who want to meet and try new dishes. App connects the parties with a Tinder like approach where Client can explore (swipe) dishes, connect with the Hosts, arrange the dinner and experience the food culture.

Tasks:

- Admin panel for managing projects, bookings with roles system.
- Custom online ordering system and payments.
- POS (point of sale) implementation.
- IOS and Android apps.

Result:

Restaurant can take:
– Table order;
– Collection order;
– Delivery order;
Multiple types of user management: Restaurant Manager, Waiter, Delivery boy etc.
Also:
– Online mode app will have real time data synchronization with web admin;
– Analytical sales reports;
– Sales history;

★★★★★

"The team proposed a lot of solutions to drastically improve the user experience and overcame all the challenges."
CEO, Real Estate Company
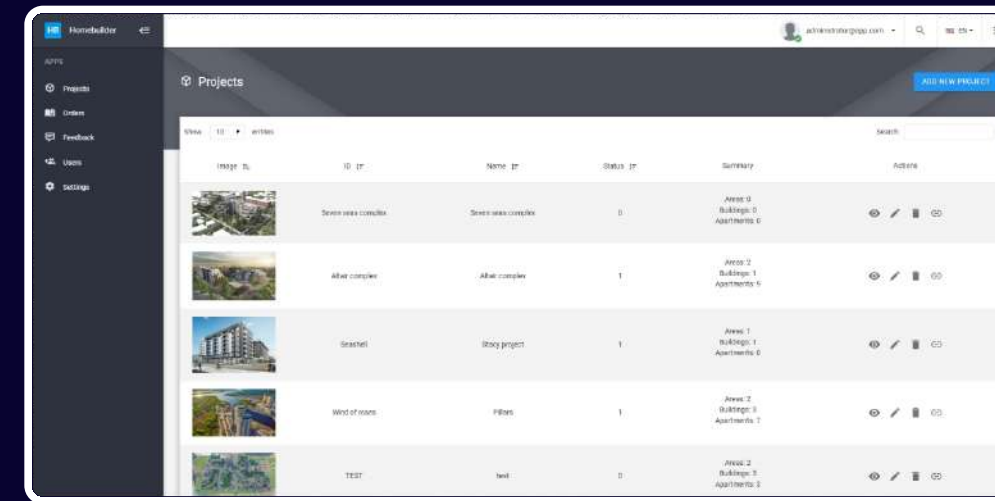

Online activity search tool
iFindCheaters

An online dating search tool that has been developed for investigation whether your partner is cheating on you. Service accesses more than 50+ popular dating networks and mobile applications, allowing to find any dating profiles.

Tasks:

- The application was broken by a previous intervention, first task was to restore the whole application.
- Remove miner viruses.
- Refactor the code and redevelop the architecture of the application.
- Speed up the search proccess.
- Integrate new design and implement SEO optimization.
- Create new control panels for users and admin.
- Create additional features and integrate new types of searches.

Result:

The application started to work again. Dividing the infrastructure drastically increased the speed of search from couple of minutes to 30 seconds. New admin panels improved both user experience and application management for admin. New types of searches allowed to add new pricing plans thus increasing the proposed services for users and more options to gain profit for the owner of the product.
SEO optimization increased the visibility to web search engines.

Online quoting live app
Flosh.io

It's the app that enables real time quoting and status notification of the order on the website. It can be embedded to the website using iframe or modal window. It will show the quote form as well as status chart with information how fast the quote is usually being replied. The status chart also shows the progress info. The status chart also shows the estimation of how many minutes or hours it has taken usually to get the quote. When user submits the form, it will open this window in new separate tab / window with unique URL (eg. flosh.io/xakds234) which will remain active until the vendor change the status of the the quote as "resolved" from the admin portal.

Tasks:

· Admin panel for managing requests, with role system.
· Requests in view of tickets to easily view and manage with drag features.
· Quote bot constructor with advanced UX.
· A client widget with progress bar and list of current requests.
· A chat between the client and merchant with file transfer and other features for status updates.
· An easy solution to integrate application with clients website.

Result:

The working application with a number of user friendly features, which makes it simple and effective instrument and with built in features that are flexible to use in almost any industry. This marketing tool allows the merchant to make a communication more simple, fast and effective, and help you track your effectiveness.
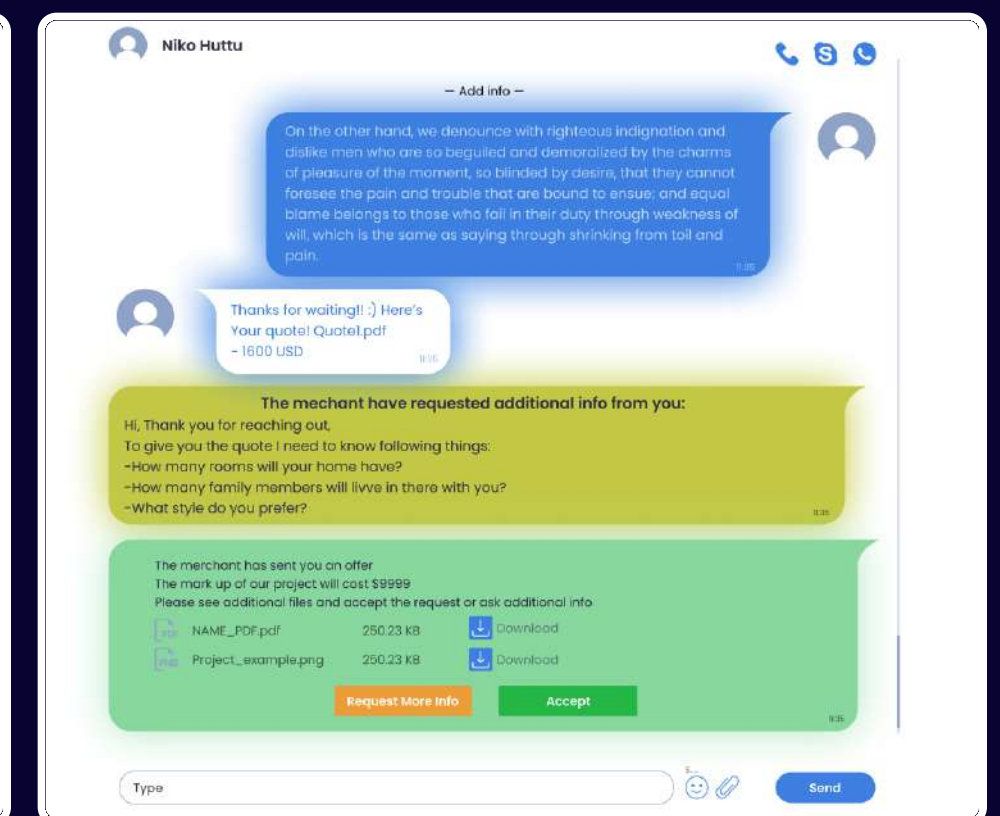

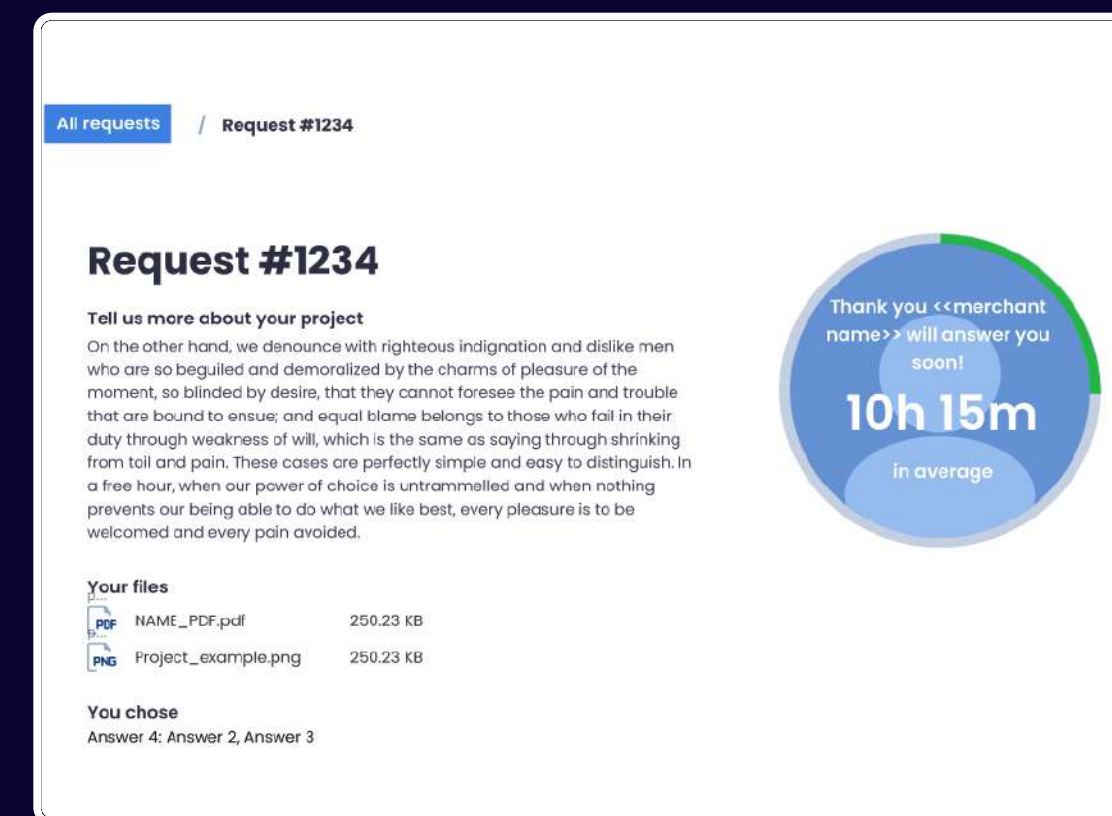

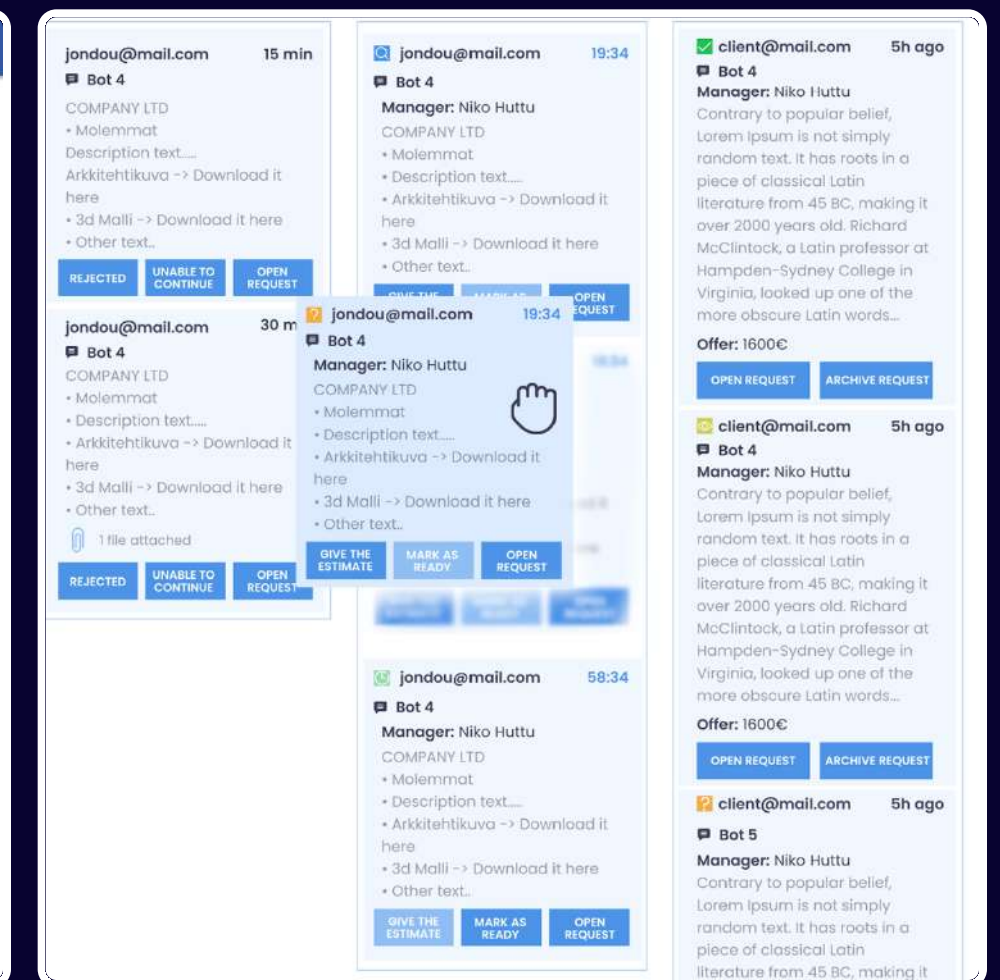

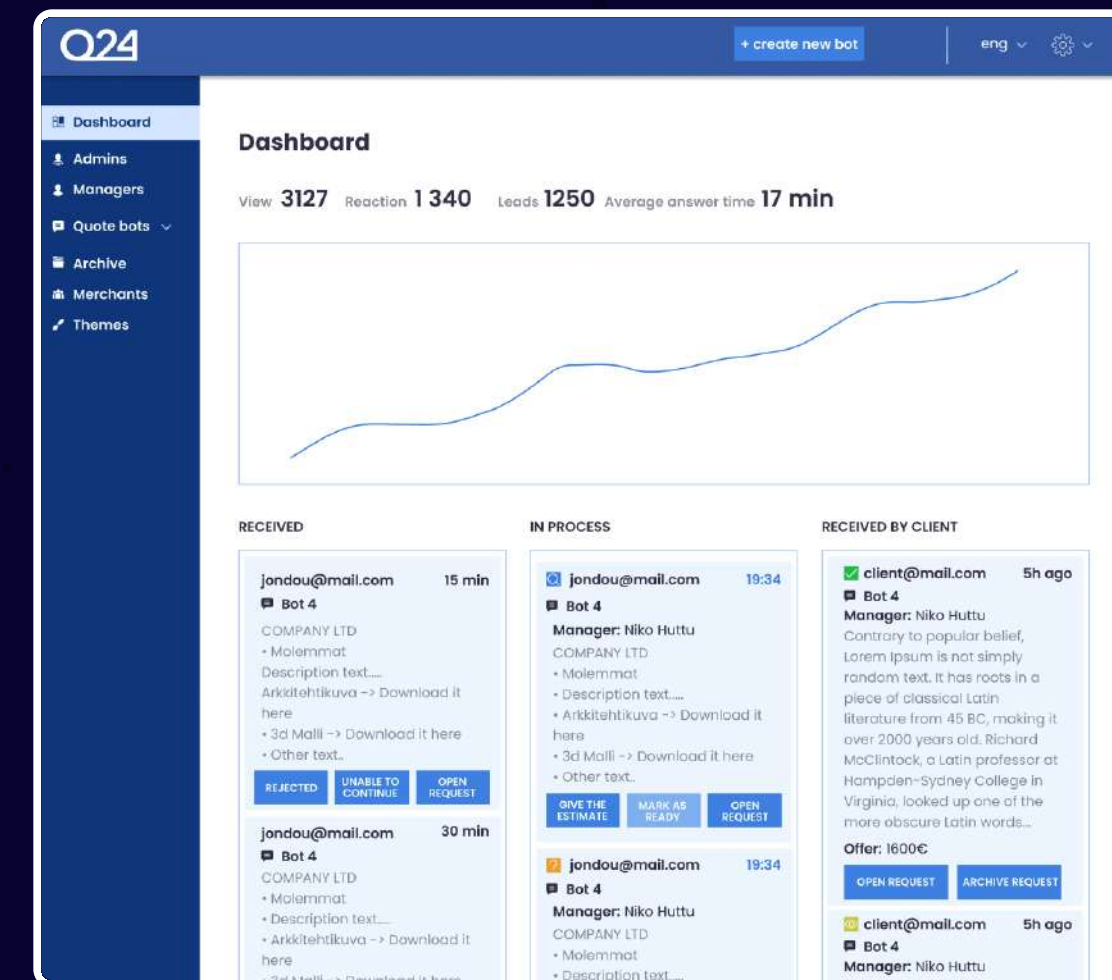

Instagram promotion platform
Insocial.io

It's the app that helps to promote Instagram accounts and improve sales by using different tools. These tools help you attract fans, engage with customers, curate content, and grow revenue.

Tasks:

- Setup the environment and fix worker issues on project.
- Switch and automate payment systems.
- Improve safety features and adjust timings for existing products.
- Add an automatic email system.
- Add additional features to existing products.
- Create an admin panel for managing clients and keep track of platform statistics and payments.
- Develop and implement new products.
- Create and implement new modern design.

Result:

The working application with a number of usчer friendly features, which makes it simple and effective instruments.
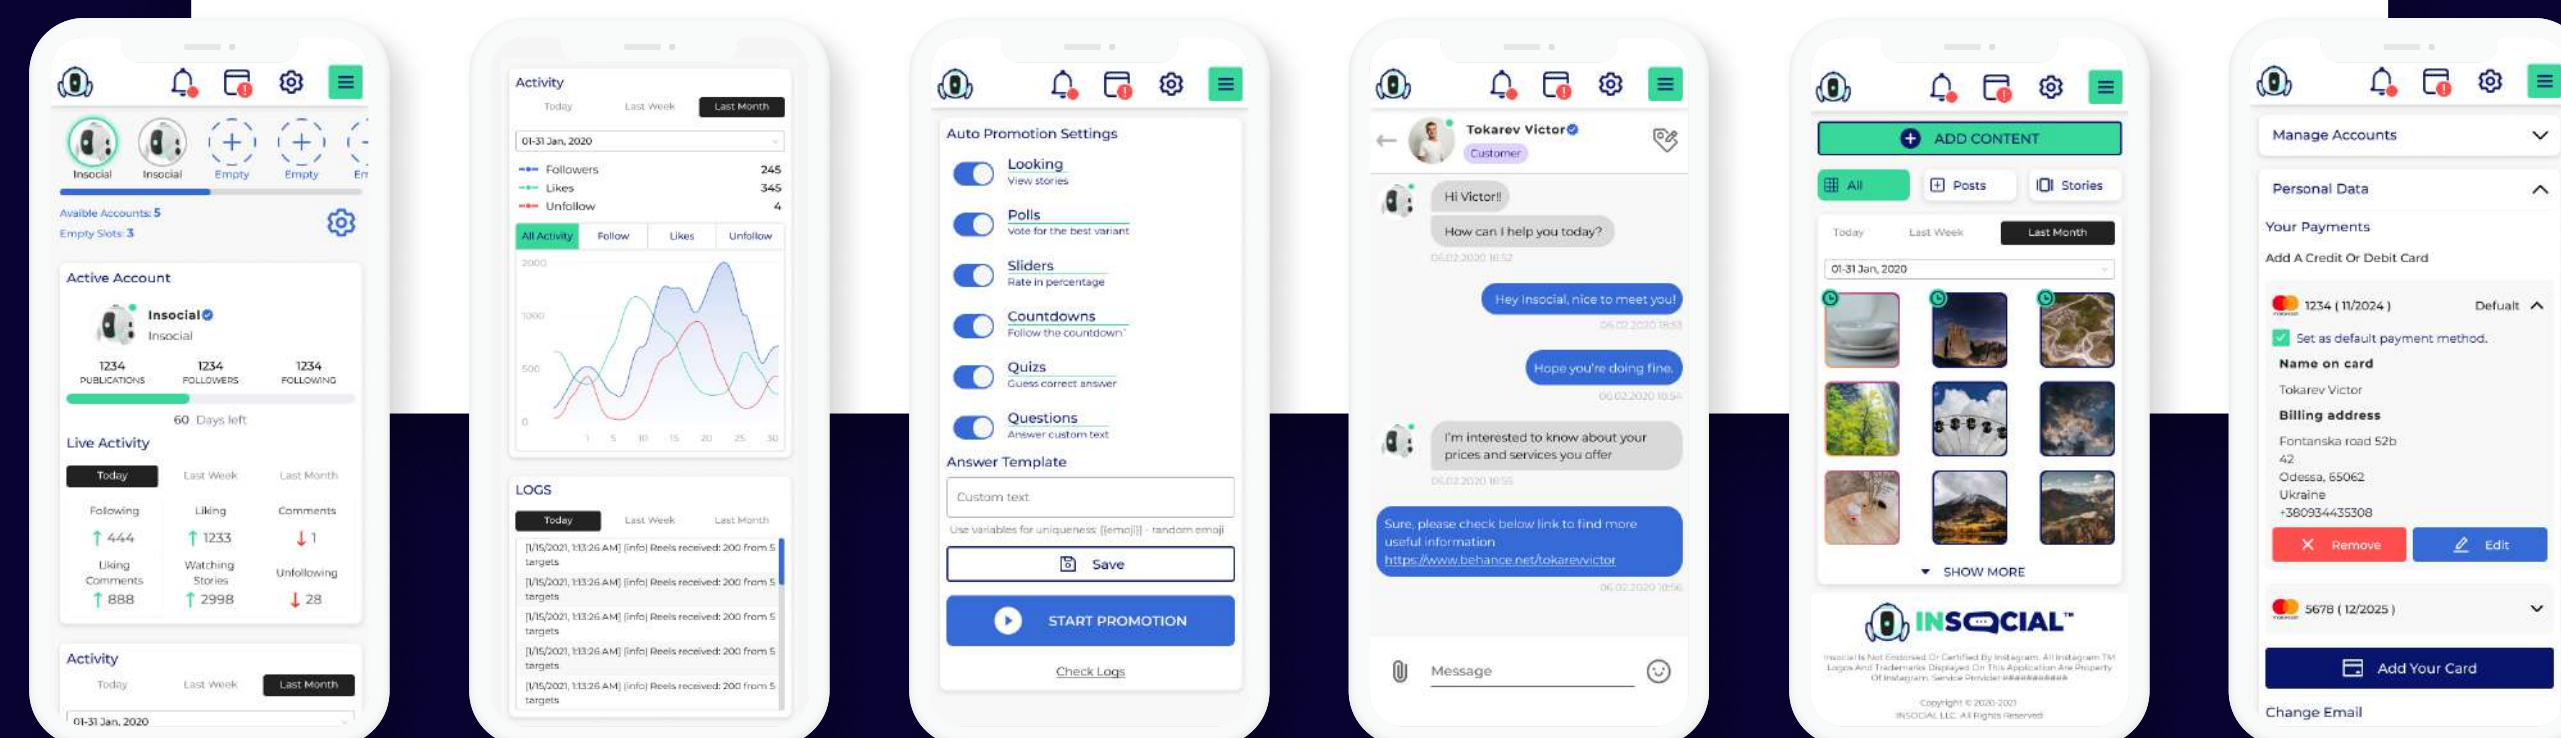

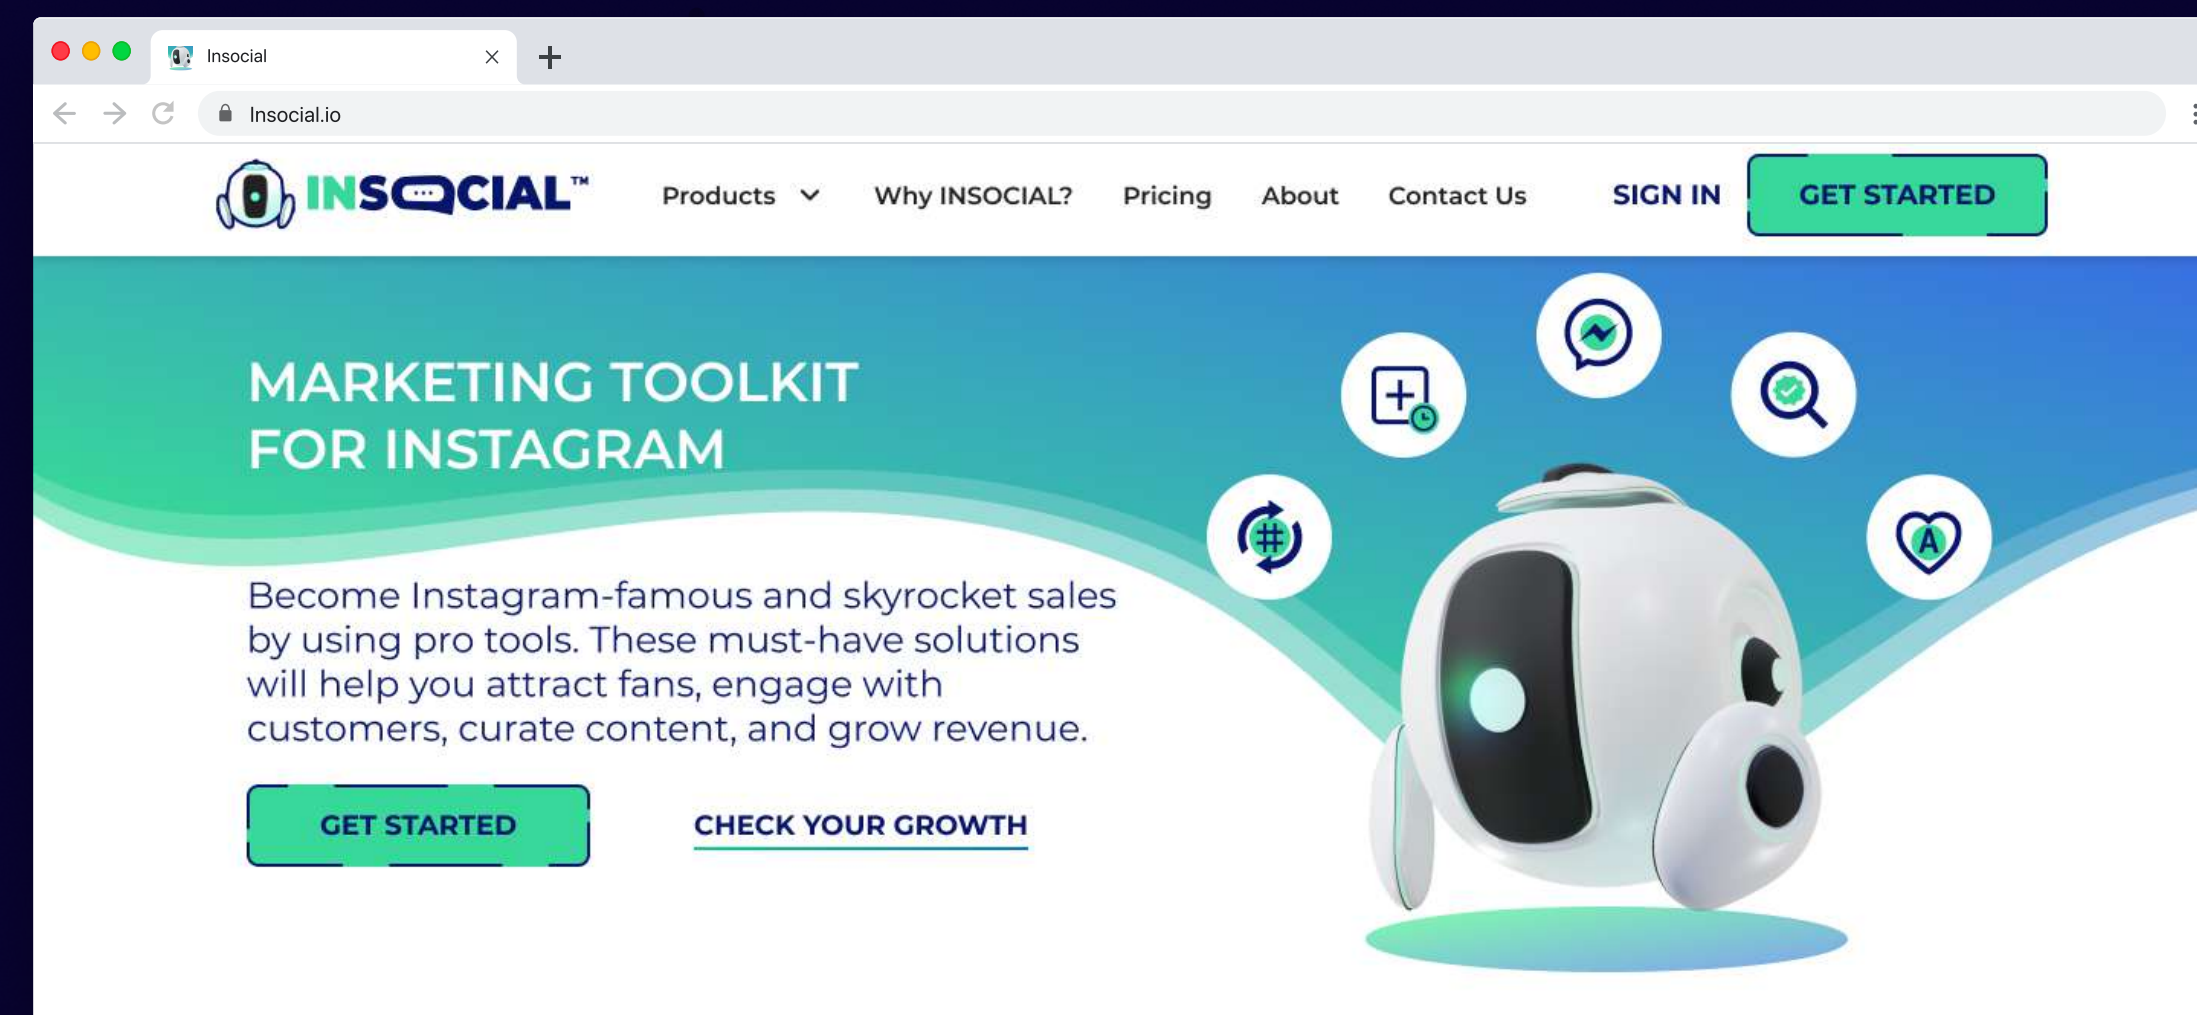

Initially tasked with implementing an automated report processing system for an investigation company, UFO Engineering also developed new platform features, expanded search options, and created a new design.
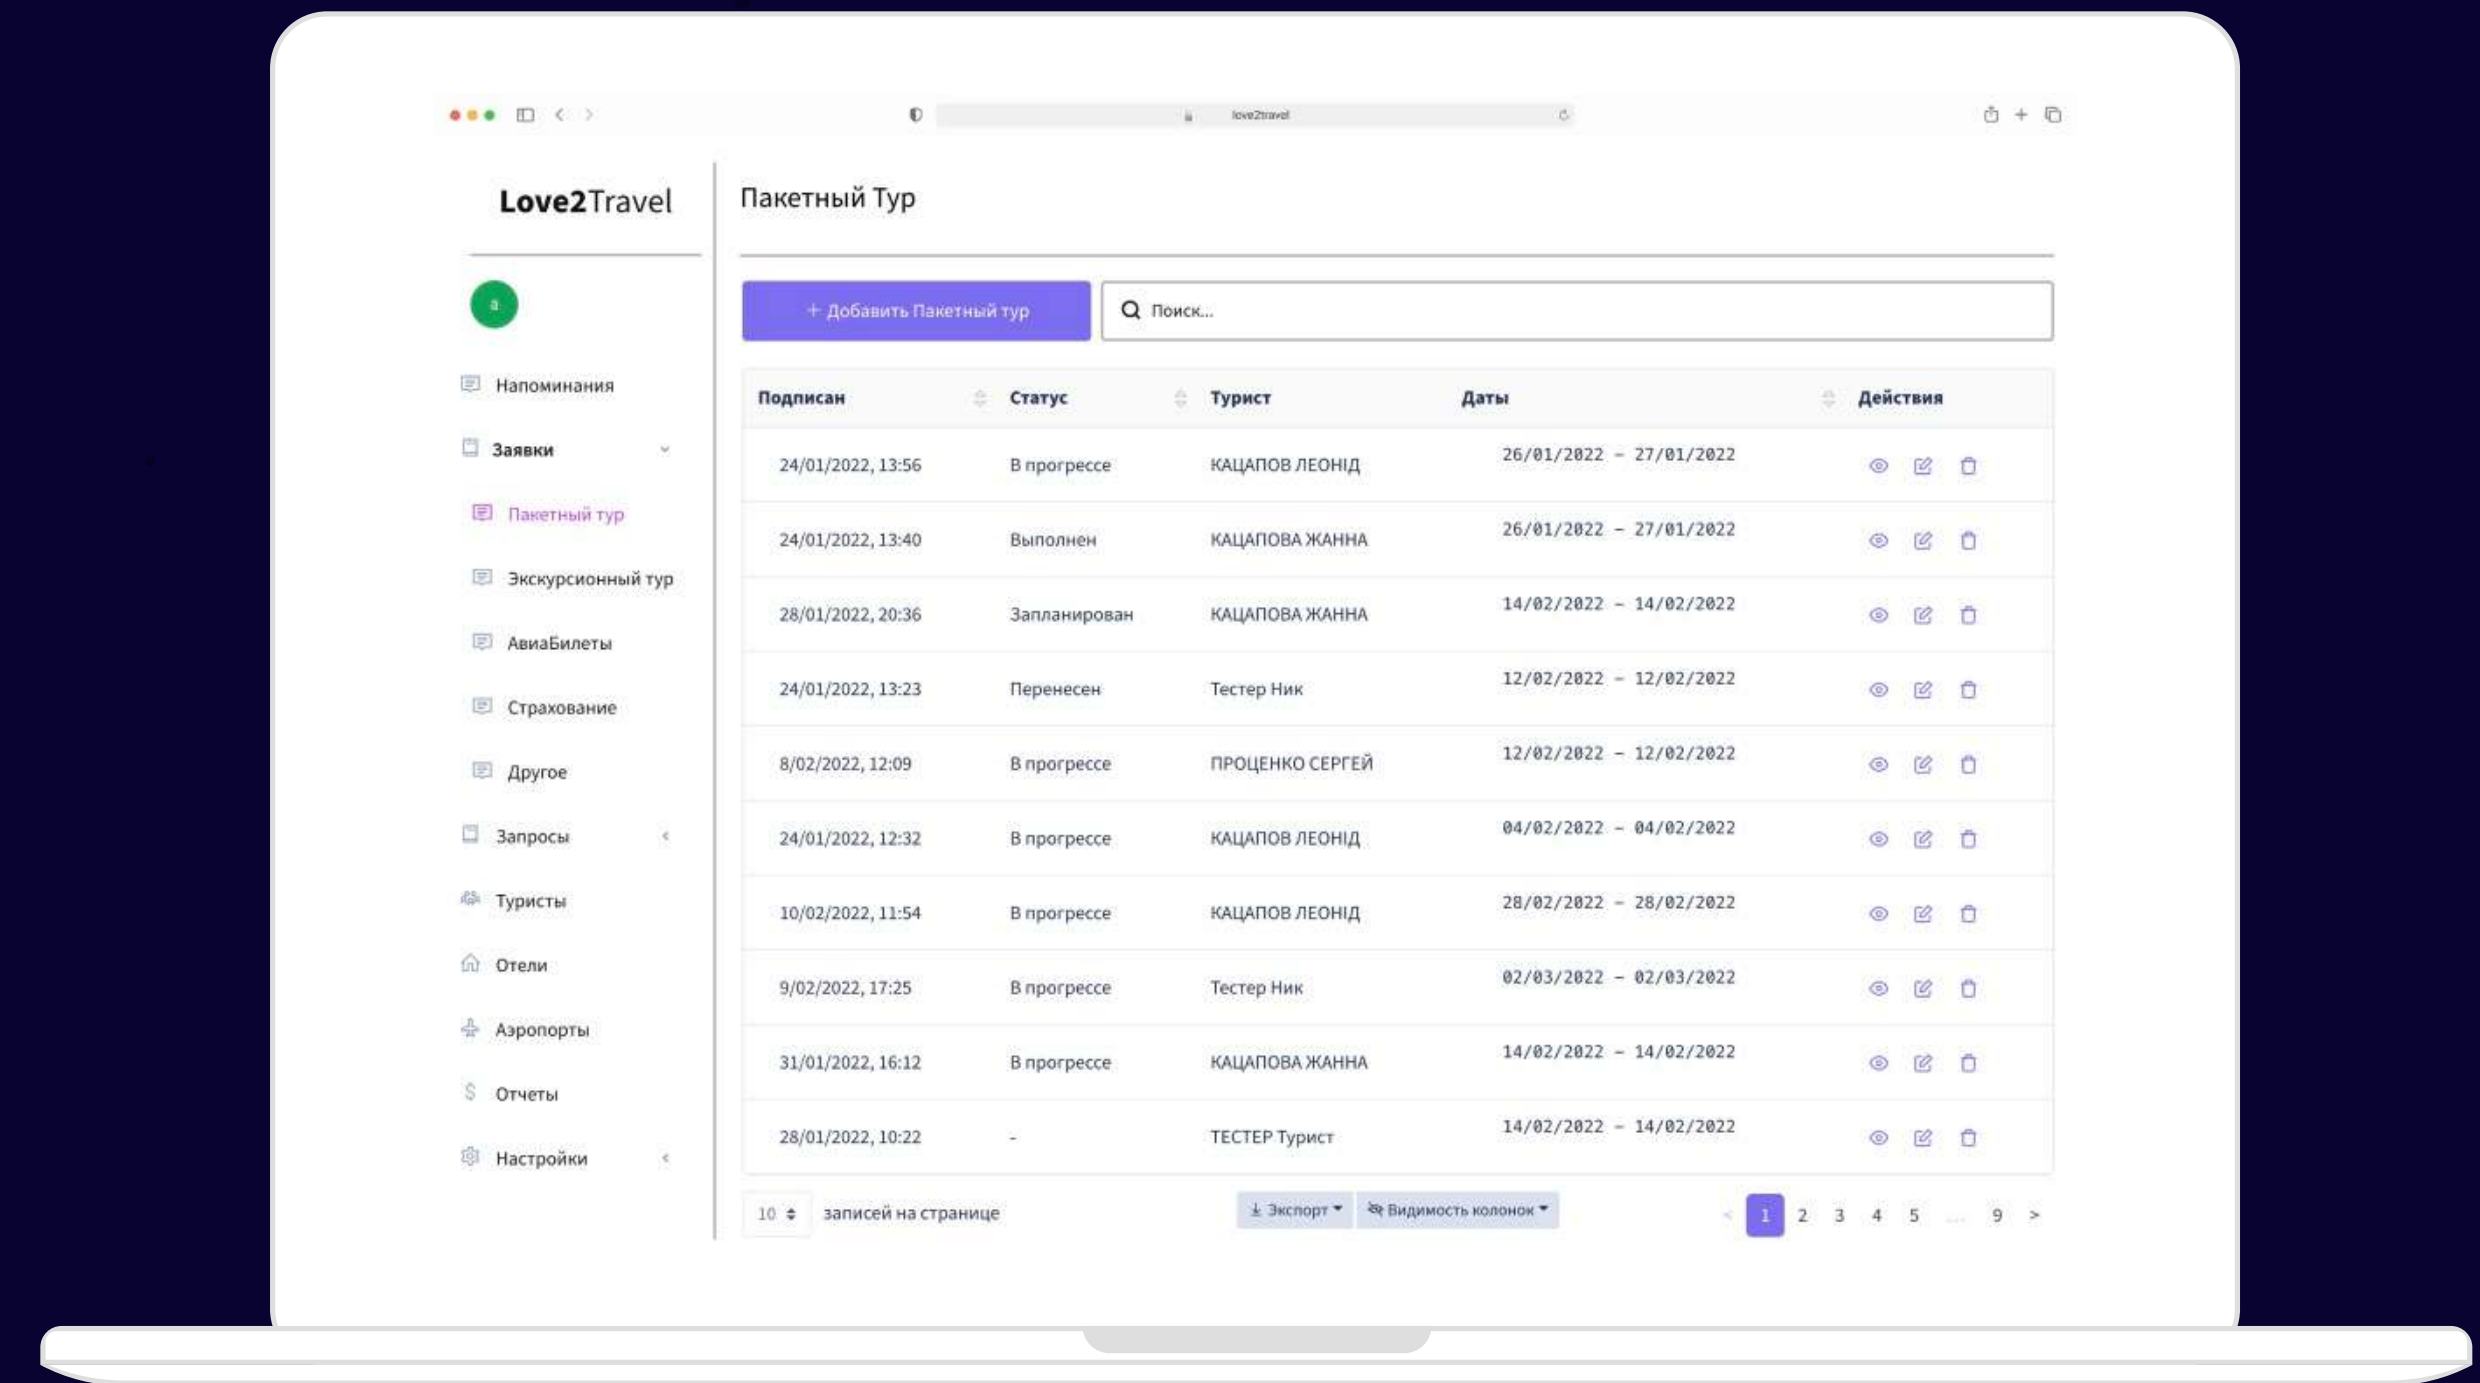

CEO/Founder, iFindCheaters LLC
